### **GENERAL COMMENTS**

**DAVID B. RAUSCH, DIRECTOR, TENNESSEE BUREAU OF INVESTIGATION:**

The TBI and the TBI's Dangerous Drugs Task Force supports the Tennessee Department of Mental Health and Substance Abuse Services (MHSAS) in addressing the escalating issues related to the use of fentanyl and xylazine. Xylazine emulates certain opioid effects, substantially increasing the risk of fatal overdose and hindering established life-saving interventions, especially when fentanyl is added. A decade ago, the Bureau's Forensic Services Division had never had an evidence submission for Xylazine. Even three years ago, xylazine was identified in less than ten cases. Unfortunately, the prevalence of Xylazine is skyrocketing. Last year it was identified in 192 submissions to the TBI labs. This year has already surpassed that total and is on pace for over 500 cases. This emerging trend not only poses a serious threat to individual health but also inflicts profound pain on the afflicted families. We believe properly scheduling Xylazine will help to mitigate the significant public health and safety risks associated with this illicit combination and will make our communities safer.

**TDMHSAS Response:**

The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) thanks TBI for their comments. TDMHSAS will continue to work with the Tennessee Bureau Of Investigation, as well other public and private stakeholders, to gather additional data, provide education, and monitor related changes at the federal level and will consider scheduling xylazine in future rule promulgation.

### **SPECIFIC COMMENTS**

**Chapter 0940-06-01-.03 Controlled Substances in Schedule III**

**FORREST REYNOLDS, DVM, PRESIDENT, TENNESSEE VETERINARY MEDICAL ASSOCIATION (TVMA):**

The Tennessee Veterinary Medical Association respectfully requests the department to reconsider the scheduling of the veterinary drug xylazine at this time. It is vital to the safe practice of veterinary medicine in Tennessee.

Xylazine is a non-narcotic veterinary sedative, analgesic, and muscle relaxant that has been approved in the United States for veterinary use since 1972. It is used throughout veterinary medicine and is especially important when working with cattle, horses, zoo, wildlife, and laboratory species to facilitate safe medical evaluation, treatment, and surgical care. Specifically, there is no other practical alternative for sedation in cattle.

According to the Tennessee Department of Agriculture, beef cattle are consistently among the top three for Tennessee's agricultural commodities, accounting for 16.7% of all agriculture cash receipts. The state is home to more than 45,000 operations and 2 million cattle. Due to the large stature of these animals, many veterinary care procedures require the use of xylazine to ensure the safety of the owners, animals and veterinary professionals. These surgical procedures would not be possible or would be inhumane without such a short-term sedative/analgesic.

In addition, the effects of xylazine can be reversed using an antidote administered by a veterinarian. Thereby hastening the recovery of the animal. This is specifically useful in cattle and horses because it helps avoid bloat if they are down for too long. Failure to recover either species as rapidly as possible often results in the death of the patient.

Veterinarians in Tennessee fear the loss of availability of xylazine without which they would not be able to properly treat certain patients. There are currently only two manufacturers of xylazine for veterinary use in the United States. Xylazine is a low-volume generic drug that generates little revenue for manufacturers, and we do not believe there is a significant diversion from the legitimate veterinary distribution channel. Increased regulations on legitimate xylazine to address illicit xylazine will result in supply chain disruptions or eliminate the product from the market. If xylazine is scheduled as a controlled substance without an exception for veterinary use, there is a very real risk that it will cease to be available in Tennessee because of the increased regulatory burden and costs for the manufacturers and distributors.

Xylazine is prescribed and dispensed in very rare cases outside of a veterinary clinic since its use is intended for sedation during procedures performed by a veterinarian. Thus, information about it is not expected to be captured by the Tennessee Controlled Substance Monitoring Database.

Veterinarians understand the desire to combat illicit xylazine due to its increased usage in street drugs. We support the American Veterinary Medical Association's diligent work at the federal level to help craft laws and regulations that will make a difference and maintain its availability to our profession.

During the 2023 legislative session, TVMA worked closely with the bill sponsors of HB1242/SB1398 regarding xylazine. This new law criminalizes possessing, manufacturing, delivering, or selling xylazine in Tennessee while exempting legitimate veterinary practice and possession by non-veterinarians with valid prescriptions from a licensed veterinarian. This was an attempt to ensure law enforcement can arrest those in possession of xylazine, while not endangering its availability to veterinarians. In keeping with this recently enacted law, we respectfully request that any rule related to scheduling of xylazine exempt use in legitimate veterinary practice.

The TVMA applauds the department for its work to provide mental health, drug and addiction services to those in our state who need it most. We understand the desire to curb the use of xylazine mixed with other dangerous drugs but hope we have provided sufficient information about its necessity in the practice of veterinary medicine. A federal solution is anticipated soon, until then we appreciate your consideration of this necessary amendment for all Tennessee veterinarians and the animals under their care.

#### **TDMHSAS Response:**

The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) thanks the Tennessee Veterinary Medical Associations (TVMA) for their comments and their ongoing commitment to addressing the evolving opioid crisis and acknowledging that Xylazine is now playing a major role in complicating the public health response to the crisis. While recent comments from the DEA suggest that the Xylazine found in the illicit samples likely comes from both legitimate sources, such as the veterinary controlled substance supply, and the illicit market, it is currently unknown how much Xylazine found in illicit substances originated from legitimate markets. After careful consideration, TDMHSAS will remove Xylazine from the proposed rule and continue to work with public and private stakeholders to gather additional data, provide education, and monitor related changes at the federal level and will consider scheduling Xylazine in future rule promulgation.

**JANET D. DONLIN, DVM, EXECUTIVE VICE PRESIDENT AND CHIEF EXECUTIVE OFFICER,  
AMERICAN VETERINARY MEDICAL ASSOCIATION:**

The American Veterinary Medical Association (AVMA) recognizes the threat of illicit xylazine as it poses grave health and safety risks to human users. However, if scheduling of xylazine happens in Tennessee without an exemption for veterinary users, it would drastically change the way veterinarians are able to care for their patients, creating animal welfare and human safety concerns. As you can imagine, this is a huge concern for veterinarians and livestock producers.

Xylazine is a non-narcotic veterinary sedative, analgesic, and muscle relaxant that has been approved in the United States for veterinary use since 1972. It is used across veterinary medicine and is especially important when working with cattle, horses, zoo, wildlife, and laboratory species to facilitate safe medical evaluations, treatment, and surgical care.

Sedation of fractious and large animals with xylazine is critical to keeping people and animals safe. This drug is needed for safe cattle handling and when performing procedures such as disbudding/dehorning, treating leg or hoof injuries, and handling obstetrical complications such as pulling calves, performing Caesarian sections, and correcting uterine torsions. Xylazine can also be used to immobilize injured animals at processing plants before euthanizing and disposal in compliance with USDA humane handling requirements. There is no practical alternative for sedation in cattle. Limiting veterinary access to this critical drug will jeopardize animal welfare and human safety.

There are currently only two manufacturers of xylazine for veterinary use in the United States. Xylazine is a low-volume generic drug that generates little revenue for manufacturers and we do not believe there is a significant diversion from the legitimate veterinary distribution channel. Increased regulations on legitimate xylazine to address illicit xylazine will result in supply chain disruptions or eliminate the product from the market. If xylazine is scheduled as a controlled substance without an exemption for veterinary use, there is a very real risk that it will cease to be available in Tennessee because of the increased regulatory burden and costs for the manufacturers and distributors. It is our understanding that one of the manufacturers has already ceased making the product until there is more regulatory clarity and uniformity between states. This leaves one manufacturer currently providing product to the entire U.S. market.

The veterinary community is not taking the drug epidemic and the role xylazine plays lightly. Discussions with the U.S. Drug Enforcement Administration (DEA) and lawmakers led to federal legislation that would address this issue with enforcement tools to target illicit xylazine traffickers. The Combating Illicit Xylazine Act (H.R. 1839/S. 993) was introduced on March 28, 2023. This bicameral, bipartisan bill is supported by a long list of stakeholders, including us and the Tennessee Veterinary Medical Association (TVMA). The legislation would engage and equip the DEA with tools to combat illicit xylazine trafficking while maintaining veterinarians' access and ability to legitimately use this critical animal sedative regulated by the Food and Drug Administration as a prescription animal drug. It includes a provision requiring manufacturers and distributors of legitimate xylazine to report sales to DEA through an existing tracking system (ARCOS) and would identify any unusual activity or change in ordering patterns. This feature would not normally be part of scheduling a drug like xylazine. Additionally, any diversion of xylazine from the veterinary supply chain for unlawful use in humans would be subject to harsher penalties under the Controlled Substances Act.

Key elements of the Combating Illicit Xylazine Act were recently incorporated into the Support for Patients and Communities Reauthorization Act (H.R. 4531 or SUPPORT Act) and passed out of the House Energy and Commerce Committee on July 19. Floor action in the House is pending. This bill would schedule xylazine as a schedule III drug and exempt the FDA-approved animal drug from scheduling. This is an approach that Congress has taken before with another animal drug, as has Tennessee (see T.C.A. §39-17-404).

In addition, AVMA and TVMA supported TN H.B. 1242/TN S.B. 1398 which was signed into law this past May. This new law criminalizes possessing manufacturing, delivering, or selling xylazine in Tennessee while exempting legitimate veterinary practice and possession by non-veterinarians with valid prescriptions from a licensed veterinarian. In keeping with this recently enacted law, we respectfully request that any rule related to scheduling of xylazine exempt use in legitimate veterinary practice.

Suggested language:

Xylazine as a Schedule III substance except when it is used in any of the following manners:

1. Dispensing or prescribing for, or administration to, a nonhuman species of a drug containing Xylazine that has been approved by the Secretary of Health and Human Services under section 512 of The Federal Food, Drug, and Cosmetic Act (21 U.S.C.A. § 360b).
2. Dispensing or prescribing for, or administration to, a nonhuman species that is permissible under section 512(a)(4) of The Federal Food, Drug, and Cosmetic Act (21 U.S.C.A. § 360b(a)(4)).
3. The manufacturing, distribution or use of Xylazine as an active pharmaceutical ingredient for manufacturing an animal drug approved under section 512 of The Federal Food, Drug, and Cosmetic Act (21 U.S.C.A. § 360b or issued an investigation use exemption under subsection (j) of § 512.)
4. The manufacturing, distribution or use of a Xylazine bulk chemical for pharmaceutical compounding by licensed pharmacist or veterinarians.
5. Another use approved or permissible under The Federal Food, Drug, and Cosmetic Act.

The AVMA continues to work with Congress, the Administration and Federal agencies on solutions to address this pressing public health issue while maintaining veterinarians' access and use of this critical veterinary drug. A federal solution is anticipated soon, until then we appreciate your consideration of this necessary amendment for all Tennessee veterinarians and the animals under their care.

**TDMHSAS Response:**

The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) thanks the American Veterinary Medical Associations (AVMA) for their comments and their ongoing commitment to addressing the evolving opioid crisis and acknowledging that Xylazine is now playing a major role in complicating the public health response to the crisis. After careful consideration, TDMHSAS will remove Xylazine from the proposed rule and continue to work with public and private stakeholders to gather additional data, provide education, and monitor related changes at the federal level and will consider scheduling Xylazine in future rule promulgation.

**CHLOE LIGON, DIRECTOR OF POLICY AND ADVOCACY, TENNESSEE ASSOCIATION OF MENTAL HEALTH ORGANIZATIONS (TAMHO):**

I am writing today on behalf of the Tennessee Association of Mental Health Organizations (TAMHO) to provide feedback on the new TDMHSAS Controlled Substances Rules filed on 6/30/23. TAMHO represents not-for-profit community mental health and substance use providers who serve children, adults, and families across the state. Our members have thoroughly reviewed the new, proposed rules, and our feedback follows.

Thank you for taking our suggestions into consideration.

TAMHO recommends that if Xylazine is scheduled, legislation changing the current statute around test strips needs to be introduced. Currently, it is illegal to do test strips on scheduled drugs. We wish to see legislation in which test strips are permitted in the case of Xylazine, similar to what was done with Fentanyl previously. Ideally, the wording would be changed so that legalized strips are not substance-specific, but rather have the ability to be used broadly across substances.

**TDMHSAS Response:**

The Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS) greatly appreciates the Tennessee Association of Mental Health Organizations' (TAMHO) comments and recommendations regarding the department's proposal to schedule Xylazine as a

controlled substance under our departmental rules. Specifically, TAMHO questions whether scheduling Xylazine as a controlled substance in rules will make Xylazine test strips illegal drug paraphernalia under Tennessee law and, if so, recommends legislation to prevent those test strips from being considered drug paraphernalia. It is this department's understanding that testing equipment is only considered drug paraphernalia when used to test for a controlled substance, as defined in the Tennessee Code at Title 39, Chapter 17, Part 4 (see definition of "drug paraphernalia" at T.C.A. § 39-17-402(12)). Adding Xylazine as a scheduled controlled substance under our department rules does not automatically place it in the Tennessee Code's schedule of controlled substances. Thus, this change to the rules should not affect whether these test strips are considered drug paraphernalia. The department recommends that all persons and entities consult their own attorneys regarding any specific legal concerns they may have. That said, and after careful consideration, TDMHSAS will remove Xylazine from the proposed rule and continue to work with public and private stakeholders to gather additional data, provide education, and monitor related changes at the federal level and will consider scheduling Xylazine in future rule promulgation.

### **Regulatory Flexibility Addendum**

Pursuant to T.C.A. §§ 4-5-401 through 4-5-404, prior to initiating the rule making process, all agencies shall conduct a review of whether a proposed rule or rule affects small business.

These rules will not affect small businesses. Although, some pharmacies qualify as small businesses, the changes to the controlled substances schedules promulgated by these rules should not change the daily operations of those pharmacies.

### **Impact on Local Governments**

Pursuant to T.C.A. §§ 4-5-220 and 4-5-228, "On any rule and regulation proposed to be promulgated, the proposing agency shall state in a simple declarative sentence, without additional comments on the merits or the policy of the rule or regulation, whether the rule or regulation may have a projected financial impact on local governments. The statement shall describe the financial impact in terms of increase in expenditures or decrease in revenues."

TDMHSAS believes that these rules will not have a projected financial impact on local governments.

### **Additional Information Required by Joint Government Operations Committee**

All agencies, upon filing a rule, must also submit the following pursuant to T.C.A. § 4-5-226(i)(1).
